Summary

AI-focused Software engineer with over 1 year experience of full-stack experience building production applications using Next.js, TypeScript, Python, and Java. Experienced in agentic workflows, prompt engineering, LLM evaluation, durable orchestration, Web Development and human-in-the-loop AI systems. Expertise in translating real business problems into reliable, scalable AI solutions.

Experience

- **Webknot Technologies Pvt. Ltd.** Bengaluru, Karnataka, India
  Software Developer Intern *November 2025 – June 2026*
  - Engineered candidate and recruiter-facing modules for a D2C recruitment platform using **Next.js** and **TypeScript**, delivering role-specific user experiences.
  - Developed AI interview agents for a recruitment training platform using **Python**, **LangGraph**, and **OpenAI GPT-4.1**.
  - Designed an automated evaluation pipeline that generated structured feedback reports scoring candidates on tone consistency, content delivery, confidence, and other behavioral parameters right after the completion of the interview.
  - Built a memory and context taxonomy to persist per-user interview history and context across sessions, enabling continuity across multiple interview attempts.
  - Architected backend services with **Spring Boot** and **FastAPI**, building REST APIs, **PostgreSQL** data models, and the internal communication layer between the backend and AI/LLM inference services.
  - Resolved critical production bugs, improving system stability and resolving user complaints.
  - Implemented unit and integration tests using **Jest**, **React Testing Library**, and **MSW**, increasing code reliability and validating component behavior across key user workflows.
- **Apex Academy** Bengaluru, Karnataka, India
  Full Stack Developer Intern *March 2025 – November 2025*
  - Constructed a multi-tenant education management platform with **Next.js**, supporting multiple educational institutions on a single platform through organization-level data and user isolation.
  - Configured secure authentication with **BetterAuth (OAuth2)** and developed backend REST APIs with **Hono.js** on **Supabase**.
  - Modeled the database schema with **Drizzle ORM** for end-to-end type safety.

Education

- **RNS Institute of Technology** Bengaluru, Karnataka, India
  Bachelor of Technology – Computer Science and Engineering; CGPA: 8.70 *December 2022 – May 2026*
- **BASE PU College** Bengaluru, Karnataka, India
  12th Grade: Percentage; 96% *June 2020 – March 2022*

Technical Skills

- **Languages:** Python, TypeScript, JavaScript, Java, SQL, C++, C
- **AI & LLM Engineering:** AI Agents, LangGraph, Agentic Workflows, Prompt Engineering, Tool Calling, RAG, LLM Evaluation, Human-in-the-Loop Systems, Memory and Context Management, OpenAI API, MCP
- **Frameworks & APIs:** React, Next.js, FastAPI, Fastify, Spring Boot, Hono.js, LangChain, Streamlit, REST APIs, OAuth2
- **Databases & Infrastructure:** PostgreSQL, Temporal, Prisma, Drizzle ORM, Supabase, Firebase, Cloudflare R2, Docker
- **AI & Data Tools:** OpenAI, Mistral OCR, Ollama, FAISS, Sentence Transformers, Scikit-learn, Pandas
- **Testing & Developer Tools:** Jest, React Testing Library, MSW, Git, Cursor, Codex, Claude Code, Gemini, Postman

Projects

- **Queans – AI Document Intelligence Platform:** Created an end-to-end AI document intelligence platform transforming educational PDFs into structured question banks using OCR, LLM-based extraction, confidence evaluation, and human-in-the-loop validation. Designed resilient **Temporal** workflows for asynchronous orchestration with durable retries, duplicate detection, automated quality gating, and scalable document ingestion for production-ready processing.
  Tech: TypeScript, Fastify, Temporal, PostgreSQL, Prisma, Cloudflare R2, Mistral OCR, LLM Evaluation
- **Motion Algorithm – Self-Driving Navigation:** Developed a **Virtual Force Field (VFF)** navigation algorithm for autonomous campus vehicles, enabling real-time obstacle detection, collision avoidance, and path planning. Integrated Arduino-based steering control through serial communication for autonomous vehicle movement.
  Tech: Python, Arduino, Serial I/O
- **Conversational RAG Multi-PDF Agent Q&A:** Crafted a **Streamlit** application that allows users to upload multiple PDFs and ask natural language questions over their document content. Implemented text extraction, chunking, semantic search, and conversational retrieval using **RAG**, **LangChain**, **FAISS**, **Sentence Transformers**, and **Ollama**, with persistent chat history for multi-turn Q&A.
  Tech: RAG, Python, Streamlit, LangChain, Ollama, FAISS, Sentence Transformers, PyPDF2
- **EduLens – Academic & Placement Analytics:** Analyzed academic and placement records of over **600 students** to identify performance trends using machine learning models and interactive visualizations. Generated actionable insights to support academic planning and placement readiness.
  Tech: Python, Pandas, Scikit-learn, Matplotlib
